Glaucoma Detection Clinic Set For May 19 At ACHS

Free, quick, and painless describe the testing procedures to be used at the proposed glaucoma screening clinic to be held May 19, 1974, in the Appomattox County High School cafeteria in Appomattox. The Steering Committee met March 11, 1974.

The Appomattox Lions Club will sponsor the screening under the auspices of the Virginia Society for the Prevention of Blindness. Trained volunteers, ophthalmologists, and nurses will contribute their time.

Glaucoma is an eye disease characterized by increased pressure in the eye. Vision loss is usually gradual, and the sufferer may remain unaware that he has the disease. Sight lost due to glaucoma cannot be restored and, without treatment, glaucom may cause blindness. Early detection and treatment are the only means of preventing blindness from this disease.

Glaucoma occurs most often among those 35 and older, has a tendency to run in families, and is not contagious. Blurred vision, difficulty seeing at night, seeing rainbow colored rings around lights, and loss of side vision are symptoms of glaucoma and are reasons to seek professional diagnosis.

The Appomattox glaucoma screening is open free of charge to adults 35 and over. It will be held from 2 p.m. to 4 p.m. on May 19, 1974.

All Virginia Society for the Prevention of Blindness programs operate with the approval and cooperation of local public health and medical authorities.
